

Our Company target is to create the safest packaging tailored on your product. Our unique technology is based on folding the corrugated board to create a high shock resistant "air space" safely holding your product. Our technique in packaging guarantees an outstanding mechanical protection.

Our product is:

Cost effective...

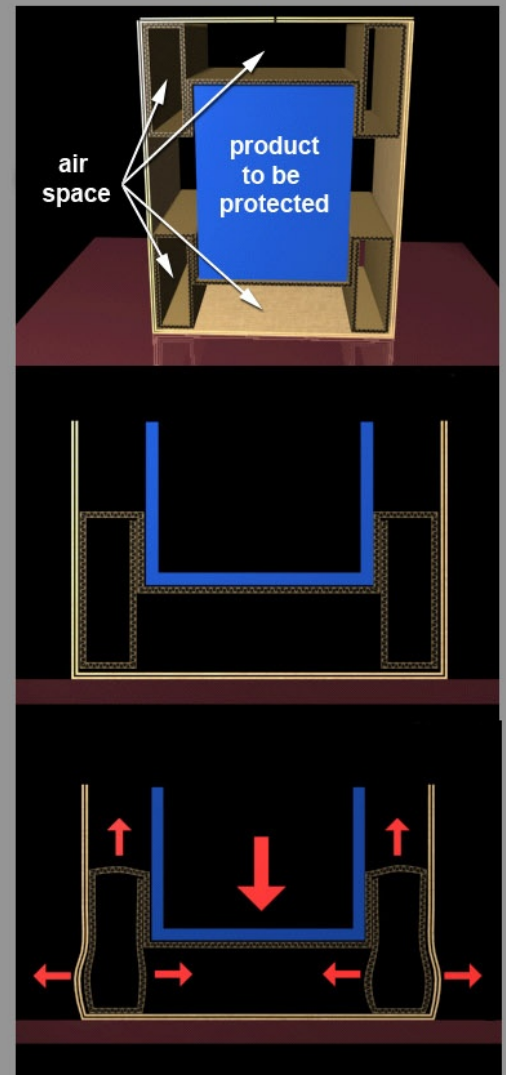

Studying your product we are able to realize "The" cost effective personalized packaging for you.

It gives the best protection...

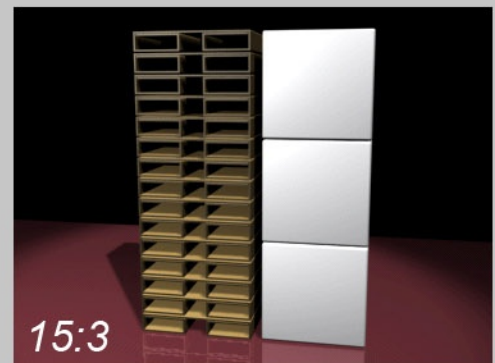

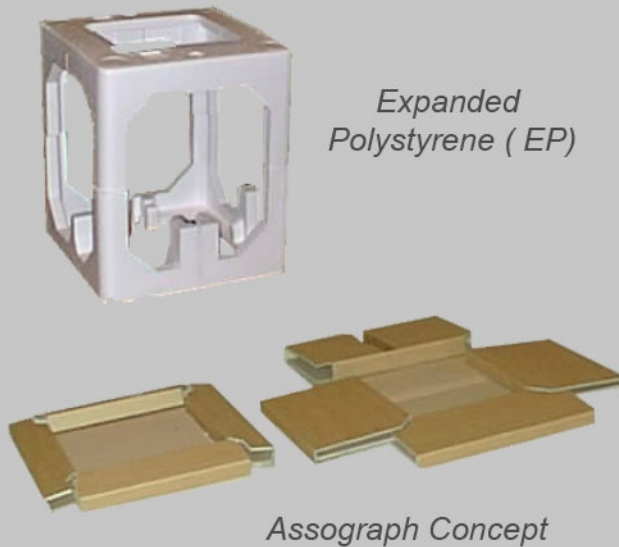

Our unique technology is based on folding the corrugated board to create a high shock resistant "air space" safely holding your product. Our technique in packaging guarantees an outstanding mechanical protection (shock wave absorption between 60% to 80%)

Assograph creates an advanced research and development department of packaging engineering, which realized many worldwide successful patented products.

It helps optimizing the space in your warehouse...

Compared to other standard protection packaging, our helps you to save space during transport, in your warehouse and on your production line. Not only; in many cases our packaging is made in one single piece making the packaging code management easier.

It's eco-compatible (mono-material)...

Our packaging are made with corrugated board and therefore 100% recyclable
